PROJECTS

AI Security WAF & Active Vulnerability Scanner | *Python · TensorFlow/Keras · Flask* Jan 2026 – May 2026

- Developed an active vulnerability scanner and passive WAF powered by a Bi-LSTM deep learning model achieving 99.68% accuracy classifying 7 attack categories (SQLi, XSS, SSRF, CSRF, Path Traversal, Command Injection) across 58K+ training samples.
- Implemented multi-vector vulnerability simulation payloads to automate scanning and generate vulnerability reports in JSON and Markdown formats.
- Built an AI Hacker Brain module using Groq API (Llama) for dynamic payload generation and active auditing via AI chaining.
- Deployed a Flask reverse-proxy WAF with rate limiting, auto IP blacklisting, and a glassmorphism web console for real-time threat monitoring.

Autonomous Job Application & Recruitment AI Agent | *Python · Google Antigravity SDK · Gemini API* Mar 2026 – Jun 2026

- Engineered an autonomous multi-tool AI Agent using Google Antigravity SDK to automate CV parsing, job search queries, and application logging.
- Designed custom functional tools for parsing resumes, searching recruitment databases, and exporting ATS-friendly cover letters in structured Markdown.

Medical Cell Segmentation & Counting System | *Python · PyTorch · OpenCV · Flask* Mar 2026 – May 2026

- Built an end-to-end deep learning pipeline using U-Net trained on MoNuSeg 2018 for automated cell nuclei segmentation and counting on histopathological tissue.
- Engineered preprocessing modules for image patching with overlap handling and normalization; containerized the full inference stack with Docker.
- Developed a Flask web application with dynamic diagram rendering and automated PDF report generation for clinical research use.

HUS Scientific Works | *React · TypeScript · FastAPI · SQL · Docker* Jan 2026 – Mar 2026

- Architected a high-throughput metadata repository for VNU academic publications using decoupled Repository Pattern with React/TypeScript frontend and FastAPI backend.
- Implemented debounced search with type-safe interfaces and an AI-powered semantic search API layer; orchestrated full-stack deployment via Docker Compose. (Live: hus-scientificworks.vercel.app)

TECHNICAL SKILLS

Languages: Python, C#, C/C++, SQL, Go, JavaScript, TypeScript

LLM & Agent Engineering: Google Antigravity SDK, Agentic Workflows, Prompt Engineering, Structured Markdown Outputs, Token Optimization

Deep Learning & AI: PyTorch, TensorFlow/Keras, scikit-learn, OpenCV, U-Net, Bi-LSTM, Model Fine-tuning, Feature Extraction

Web Development: React, FastAPI, Flask, Vite, REST API Design, Responsive UI/UX

Systems & Architecture: Stream Processing, Async/Parallel Programming, System Architecture, Repository Pattern

Frameworks & Tools: Git, Docker, Docker Compose, Linux Systems

EDUCATION

B.Sc. Computer and Information Science | University of Science - VNU Sep 2022 – Jun 2026

- Core Focus: Artificial Intelligence & Machine Learning, Agentic Workflows, Web Application Development, and Software Architecture.
